

Asmamaw Yehun, PhD

I am writing to apply for the **Geospatial Engineer** position in **Dublin, Ireland**. I bring extensive experience in geospatial engineering combined with strong software development skills, including Python, SQL, GNSS data processing, and backend API development.

I hold a PhD in Atmospheric Physics and have over a decade of professional experience in geodesy, satellite data analysis, and geospatial application development. As a Senior Lecturer at Bahir Dar University and Founder of Equator Geospatial PLC, I led geospatial research projects, developed software solutions, and delivered practical GIS and surveying services. My recent software engineering training further strengthened my ability to build scalable, data-driven geospatial systems.

I am highly motivated to contribute my technical expertise, research background, and problem-solving skills to your geospatial engineering team and would welcome the opportunity to discuss how I can add value to your organization.

Thank you for your consideration.

Sincerely,

Asmamaw Yehun, PhD
